

## 360™ is also for Animals and Plants

After 21 Days in  
Regular Water

After 21 Days in  
360™ Water

We have had comments from many people about giving 360™ water to animals as well as watering plants. The stories about animals drinking 360™ water and plants growing in 360™ are very interesting. Animals and plants need to hydrate with water just like people. We have had many people tell us that plants seem to thrive from being placed in 360™ water.

### **Test your dog or cat.**

Place two identical bowls on the floor, one with regular water and the other with 360™ water. What is amazing about dogs and cats choosing 360™ water over regular water is that they did so without actually tasting either water. Dogs somehow tune into 360™ water with some kind of special sensitivity and know that it is better than other kinds of water. When considering the ways in which animals behave in general with heightened sensitivity and the sense of smell, the ability to tune into 360™ water is understandable. We have had numerous pet owners perform this test with their pets and have observed their pets having a preference for 360™ water over regular drinking water. Go ahead, try it yourself with your own pets or plants.
